

ExpenseAI – Team Discussion Document
Precision Pro Mini Hackathon Series – 1
Problem Statement: Smart Expense Categorizer

1. Objective

Build an AI-powered expense tracking application that automatically categorizes user expenses based on the expense description and provides spending insights through an interactive dashboard.

Example

Input

Description: Domino's Pizza

Amount: ₹450

Output

Category: Food 🍕

Today's Spending: ₹450

Total Spending: ₹3,250

2. Understanding the Problem

Many people spend money every day but don't know where their money actually goes.

Our application should help users:

- Record expenses
- Automatically classify them
- View spending summaries
- Understand spending habits

3. MVP (Minimum Viable Product)

These are the compulsory features.

Expense Form

Fields

- Expense Description
- Amount

Button

- Add Expense

AI Category Prediction

Automatically predict the category based on the description.

Example

Description	Category
Domino's Pizza	Food
Uber Ride	Transport
Amazon Order	Shopping
Netflix	Entertainment

Description	Category
EB Bill	Bills
Apollo Hospital Health	
Udemy Course	Education

Expense Summary

Display

- Today's Spending
- Total Spending
- Number of Transactions
- Highest Spending Category

Expense Table

Columns

- Description
- Category
- Amount
- Date

4. Additional Features (If Time Permits)

- Pie Chart
- Monthly Spending
- Search Expense
- Delete Expense
- Dark Mode
- Export CSV
- AI Insights

5. Categories

 Food

 Transport

 Shopping

 Entertainment

 Bills

 Health

 Education

 Others

6. AI Logic

We don't need a complex AI model.

We'll use keyword matching.

Example

Food

pizza
burger
dominos
kfc
mcdonald
hotel
restaurant

Transport

uber
ola
bus
fuel
petrol
train
auto

Shopping

amazon
flipkart
myntra
ajio
shopping

Entertainment

netflix

prime
movie
hotstar
spotify

Bills

electricity
wifi
eb
water
gas

Health

hospital
medicine
apollo
doctor
clinic

Education

college
course
udemy
book
fees

Otherwise

AI Insights

9. AI Insights

Generate simple insights.

Example

You spent 48% on Food this month.

Shopping expenses increased.

Transport spending is low.

Bills are consistent.

Consider reducing Food expenses.

10. Tech Stack

Frontend

- React + Vite

Styling

- Tailwind CSS

Charts

- Recharts

Icons

- Lucide React

Storage

- LocalStorage

Deployment

- GitHub
-

11. Folder Structure

ExpenseAI

src

|

|— components

| ExpenseForm

| Dashboard

| ExpenseTable

| PieChart

| SummaryCards

```
| AIInsights
|
|— utils
| categorizer.js
|
|— App.jsx
|— main.jsx
└— index.css
```

12. Team Work Distribution

Member 1 (Frontend & Dashboard)

Tasks

- Create UI
 - Expense Form
 - Dashboard Cards
 - Pie Chart
 - Responsive Design
 - Expense Table
-

Member 2 (Logic & AI)

Tasks

- Category Prediction
 - Local Storage
 - Expense Calculations
 - Monthly Summary
 - AI Insights
 - Data Management
-

13. Timeline (2 Hours)

2:30 – 2:45 PM

- Create React project
 - Install dependencies
 - Design layout
-

2:45 – 3:20 PM

- Expense Form
 - AI Category Prediction
 - Save expenses
-

3:20 – 3:45 PM

- Dashboard Cards
 - Expense Table
 - Totals
-

3:45 – 4:10 PM

- Pie Chart
 - AI Insights
 - UI Improvements
-

4:10 – 4:25 PM

- Testing
 - Bug Fixes
 - README
-

4:25 – 4:30 PM

- Push to GitHub
 - Final Submission
-

14. GitHub Submission Checklist

- ☒ Source Code
 - ☒ README.md
 - ☒ Setup Instructions
 - ☒ Screenshots (Optional)
 - ☒ Clean Folder Structure
 - ☒ Working Application
-

15. Winning Strategy

- Prioritize a **working MVP** over adding too many features.
 - Make the UI clean, modern, and responsive.
 - Show **AI prediction** with a confidence percentage (even if it's keyword-based).
 - Ensure charts and summary cards update instantly.
 - Keep the code modular and well-organized.
 - Test all major flows before submission.
 - Write a clear README explaining how to run the project.
-

Final Vision

ExpenseAI should feel like a lightweight personal finance assistant. A user enters an expense, the application instantly predicts its category, stores it, updates the dashboard, and provides meaningful insights into spending habits. Even with a simple AI approach, a polished user experience, clean architecture, and reliable functionality will make the project stand out during the demo.
